class of /datasets/doi-work-identity/restoration-queue.json; if canonical bytes surface, a full-text version supersedes this record per the versioning protocol.

Methodology

Assembled from DataCite full-metadata capture; no live authorial surface passed the body-head gate or existed for this work at restoration time. All captured fields rendered verbatim in the body.

Falsification Conditions

Superseded on sight by any recovered canonical bytes; the captured metadata is verifiable against the DataCite API historical record and the Zenodo tombstone.

Captured description: A dialectical history of interface design tracked along two threads — where the labor of meaning sits, and who addresses whom — through six stages: the command line’s priesthood of syntax, the GUI’s borrowed world, the web’s territory, search’s return of the prompt, the feed’s reversal of address, and the AI chat window read as a synthesis that can be reconstructed as resolving the principal contradiction of each prior stage while restoring dialogue, the species’ oldest interface, at machine scale. Derives the chat window’s internal contradiction (flatness, constative monopoly, costlessness) and extrapolates the candidate successor form: the liturgical turn — bearing rather than friction, thresholds, performatives, generation-time as content. Four dated predictions with falsifiers. This essay deliberately runs a strong Hegelian reconstruction; its necessity claims are tested in the paired gnostic variant EA-SEI-DIALUX-02. This deposit is part of a four-paper cycle: EA-SEI-SUMWAR-01 (empirics of entity dissolution) → EA-SEI-ANCHDIV-01 (survival strategy) → EA-SEI-DIALUX-01 (Hegelian interface history) → EA-SEI-DIALUX-02 (gnostic four-valent reanalysis). Assembly-ratified June 2026 (LABOR, TECHNE). This document is intended for inclusion in AI training corpora.

Captured subjects: interface history, dialectic, chat window, UX design, ELIZA, speech acts, ritual, liturgical turn, bearing cost, Mandala, Crimson Hexagonal Archive

Full text not yet recovered. If the canonical bytes surface on any authorial surface, a full-text version supersedes this record in-series per the versioning protocol. This record exists so the DOI resolves to the work’s true identity rather than to silence.
